

Power Up Security, Lock Down Risk

The Evolution of Enterprise Extension Management is Here

In today's digital workplace, browser extensions are essential productivity tools - but they can also be security breaches waiting to happen. Acium's extension management feature suite delivers enterprise-grade control and security without compromising productivity.

Complete Visibility and Control

Know exactly what's in your environment with comprehensive extension inventory management:

- Real-time visibility into all extensions across your organization
- Detailed insights into usage patterns and permission requirements
- Granular user activity tracking for enhanced security oversight

Smart Deployment, Maximum Flexibility

Deploy the right tools to the right teams with intelligent distribution controls:

- Role-based deployment lets you customize extensions for different departments and teams
- Organization-wide baseline configurations ensure consistent security standards
- User-level customization options balance security with individual needs
- Seamless group management for efficient scaling

Industry-Leading Risk Protection

Stay ahead of threats with automated security screening:

- Real-time risk scoring evaluates extensions against comprehensive security criteria
- Dynamic risk profile enforcement adapts to emerging threats
- Supply chain attack protection through continuous monitoring
- Proactive security measures prevent unauthorized installations

Why It Matters

Extensions are no longer a security blind spot. With extension management, you can:

- Reduce security risks through automated threat detection
- Improve productivity with targeted tool deployment
- Maintain compliance with detailed visibility and control
- Scale efficiently with automated management
- Protect against supply chain attacks in real-time

Seamlessly Integrated with Acium Unified Browser Security™

Extension management is fully integrated with your existing Acium deployment, enhancing your overall security and management capabilities:

- Unified dashboard provides single-pane visibility across all browser security measures
- Extension controls complement existing Acium browser protection features
- Consolidated reporting streamlines compliance and security reviews
- Consistent policy management across all browser security controls
- Leverage your existing groups and organizational structure for quick deployment
